

Sex Education Quiz

Topic: Sex | Difficulty: Medium | Questions: 5 | Model: gemini-2.5-flash

1. Which pair of chromosomes typically determines biological sex as male in humans?

- A. XX
- B. XY (correct)**
- C. XO
- D. XXY

Explanation: In humans, the presence of an X and a Y chromosome (XY) typically results in the development of male biological sex characteristics.

2. Which hormone is primarily responsible for the development of secondary sexual characteristics in males during puberty?

- A. Estrogen
- B. Progesterone
- C. Testosterone (correct)**
- D. Oxytocin

Explanation: Testosterone is the primary male sex hormone, driving changes like muscle growth, deepening voice, and facial hair during puberty.

3. Among the following methods, which is generally considered the most effective at preventing both pregnancy and the transmission of sexually transmitted infections (STIs) when used correctly and consistently?

- A. Oral contraceptive pills
- B. Male condoms (correct)**
- C. Diaphragm
- D. Withdrawal method

Explanation: Male condoms are unique among these options in providing a physical barrier that helps prevent both pregnancy and the spread of many STIs.

4. In human reproduction, where does fertilization typically occur?

- A. Uterus
- B. Ovary
- C. Vagina
- D. Fallopian tube (correct)**

Explanation: Fertilization, the fusion of sperm and egg, most commonly takes place in the fallopian tube.

5. Which of the following STIs is caused by a virus and currently has no cure, though symptoms can be managed?

- A. Chlamydia
- B. Gonorrhea
- C. Syphilis
- D. Herpes (correct)**

Explanation: Herpes is a viral STI that currently has no cure, though antiviral medications can help manage outbreaks. Chlamydia, Gonorrhea, and Syphilis are bacterial STIs that can be cured with antibiotics.

Answer Key

1. **B** XY
2. **C** Testosterone
3. **B** Male condoms
4. **D** Fallopian tube
5. **D** Herpes
