

Child Sex & Safety In Bangladesh: Advanced Quiz

Topic: Child Sex & Safety Of Bangladesh | Difficulty: Hard | Questions: 5 | Model: gemini-2.5-flash

1. The Children Act 2013 in Bangladesh significantly reformed child protection. Which of the following is a *primary* systemic challenge in its effective implementation regarding child sexual abuse cases, particularly in rural contexts?

- A. Lack of a dedicated child protection police unit nationwide.
- B. Absence of provisions for child-friendly court procedures within the Act.
- C. The Act's failure to define 'child' consistently with international standards.

D. Over-reliance on traditional arbitration (?????) and informal dispute resolution, often circumventing formal legal processes. (correct)

Explanation: While other options represent challenges, the pervasive influence of traditional arbitration in rural Bangladesh often diverts child sexual abuse cases from the formal legal system, undermining the Children Act's intended protections and making it a primary systemic barrier to effective implementation.

2. Beyond poverty, which socio-cultural factor in Bangladesh *most significantly* exacerbates the vulnerability of adolescent girls to sexual exploitation and early marriage, often rationalized as a protective measure?

- A. High rates of female literacy in urban areas.
- B. The prevailing dowry system.

C. Societal pressure to protect family 'honor' (?????) through early marriage and restricted mobility for girls. (correct)

- D. The widespread availability of free primary education for girls.

Explanation: The strong societal emphasis on family 'honor' often leads to early marriage as a perceived means of protecting a girl's reputation and family 'honor,' paradoxically increasing her vulnerability to exploitation within marriage or if she is trafficked, and limiting her agency and mobility.

3. Bangladesh faces increasing challenges with Online Child Sexual Exploitation and Abuse (OCSEA). What is a *unique and significant* hurdle for law enforcement in prosecuting OCSEA cases compared to traditional, offline child abuse cases?

- A. Lack of public awareness about OCSEA.

B. The transnational nature of digital crimes, involving servers and perpetrators often outside national jurisdiction. (correct)

- C. Insufficient penalties for OCSEA offenses under existing laws.
- D. The absence of a dedicated cybercrime unit within the police force.

Explanation: While other factors contribute, the cross-border nature of the internet makes jurisdiction, evidence collection, and perpetrator identification extremely complex for national law enforcement agencies, posing a unique and significant challenge in OCSEA prosecution.

4. Despite legal provisions for child protection, many cases of child sexual abuse in Bangladesh go unreported or unprosecuted. Which factor *primarily* contributes to the low conviction rates in these cases, even when reported and investigated?

- A. The mandatory requirement for child victims to testify multiple times in open court.
- B. Insufficient forensic evidence collection, preservation, and analysis capabilities. (correct)**
- C. The high cost of legal representation for victims' families.
- D. Lack of public trust in the police and judicial system, leading to withdrawal of complaints.

Explanation: While all options are contributing factors, the lack of robust forensic capabilities for evidence collection, preservation, and analysis is a critical technical and systemic weakness that directly impacts the ability to build strong cases and secure convictions, even if a case proceeds through the initial stages.

5. The Rohingya refugee camps in Cox's Bazar, Bangladesh, present unique child safety challenges. Which of the following is the *most pervasive* structural risk factor for child sexual exploitation within these camps, distinct from general Bangladeshi population vulnerabilities?

- A. High rates of child marriage among the Rohingya population.
- B. Limited access to formal education for refugee children.
- C. Extreme overcrowding, inadequate lighting, and limited safe spaces, particularly for girls and women, within the camp structure. (correct)**
- D. The absence of a dedicated child protection agency within the camps.

Explanation: While child marriage and lack of education are significant vulnerabilities, the physical environment of the camps - characterized by extreme density, poor infrastructure, and lack of secure, private spaces - creates inherent and pervasive safety risks that directly facilitate sexual exploitation and abuse, making it a distinct and critical structural factor.

Answer Key

1. **D** Over-reliance on traditional arbitration (?????) and informal dispute resolution, often circumventing formal legal processes.
2. **C** Societal pressure to protect family 'honor' (?????) through early marriage and restricted mobility for girls.
3. **B** The transnational nature of digital crimes, involving servers and perpetrators often outside national jurisdiction.
4. **B** Insufficient forensic evidence collection, preservation, and analysis capabilities.
5. **C** Extreme overcrowding, inadequate lighting, and limited safe spaces, particularly for girls and women, within the camp structure.
